

**Sosford. 1625.**

A new Almanacke and Prog-  
nostication, for the yeare of  
our Lord God.

1625.

Being the first from the Bissex-  
tile or Leape yeare.

Calculated for the Latitude  
and Meridian of the most Ho-  
nourable Citie of London;  
where the Pole is exalted  
aboue the Horizon, 51.  
deg. and 32. min.

And may very well serve for  
most parts of Great  
Britaine.

*Os homini sublime dei, cœlumq; videre  
Iussit, & cœlos ad sidera tollere vul-  
(tus.*

**LONDON.**

Printed for the Company of  
Stationers. 1625.

Since his happie comming to London, May. 7.			2

**N**Ote (gentle Reader) that because the vulgar accompt as it were from the Incarnation of Christ, is supposed by the learned, to differ from the truth about two yeares: I haue in stead therof, in this Chronologicall table, taken the *Epoche* of yeares from the Baptisme of Christ in the 15. yeare of the Empire of *Tyberius Caesar*, by many reasons approved most true. Vnto which if you ad 28. you shall haue the yeare of our Lord God, according to the vulgar computation.

## A Prognostication.

### ¶ Astronomicall Calculations for this present year, 1625.

**T**He true præcession of the Æquinoctiall (according to Tycho Brahe, and others the best moderne Astronomers of this our age) is 28. de : 37 min: and 11. seconds..

The greatest obliquity of the Zodiacke, is 23. degrees, 31 min: and 30 seconds.

The Eccentricity of the Sunne is 3588. parts, the totall signe being 100000.

	deg:	min:	sec:

uation. <i>An. Dom.</i>	♀	16.	57.	20. ♀
1625.	♂	1.	17.	50. ♄

### Of the foure Quarters of the year, and first of Winter.

**W**inter, of Astronomers accounted the first quarter of the yeare, is called of *℥* Latines Hyems, which seemeth to be deriued of *℥* Greeke word *ἄω* signifying to make moyst or wet. In Hebrewe it is called Chóreph, coming of the roote Charáph, which signifieth to reproach, or disgrace, because thereby the earth is as it were disgraced, and exposed to reproach, being spoiled of all its pleasant greenesse, beauty, and splendor. It tooke his beginning vpon the 11. day of December last past, at 6 of the clocke and an halfe in the morning, at which moument the Sunne entred into the first scruple

ple of the tropicall signe Capricorne, then being in his greatest declination from the Equinoctiall towards the south, viz. 23 degrees, 31. min. and 30. sec. his meridionall height being no more then 14. Deg. 26. min. and 30. seconds.

Of the Spring.

**T**he Spring is called in Latine Ver comming of  $\gamma$  Greeke radicall woꝝd E'ap, signifying the same thing.

Others deriue it of Vireo, because then Omnia Virent, all things flourish. It beginneth at that instant when the Sun entreth into the first scruple of the Equinoctiall signe Aries, which happeneth this yeare the 10 of March at 7. a clocke and 10. min: in the Morning. This quarter is of the nature of the ayre, hot and moyst.

Of Summer.

**S**ummer in Latine Aestas, is so called of Aestas heate, both which woꝝds are derined of the Hebrewe roote Esh, signifying fire: thereby denoting vnto vs the exceeding hot and fiery nature of this quarter, and especiall in the Dagdapes. The Hebrewes callit Kafits of the Root Kuts, which in Hiphil signifieth to awake, or stirre vp. The reason of this denomination is, because that at this time all things growing vpon the earth are as it were awaked and roused vp from that heauie slumber, wherewith all the winter tyme they seemed to be deeply possessed. This quarter beginneth when the Sunne entreth into the tropicall signe Cancer, then hauing the greatest north declination that can be viz. 23 deg. 31. min: and an halfe, which commeth to passe this yeare vpon the 11. day of Iune at Ten of the clocke and 57 min: before none.

Of Autumne.

**A**utumne so called a bonorum anni augmentatione, is the last quarter Astronomicall, but the third after the common account, and taketh its beginning this yeare vpon the 13. day of September at one of the clocke and an halfe in the morning, that is when the Sunne maketh his ingresse into the first scruple of the Equinoctiall signe Libra. This

## A Prognostication.

This quarter resembles the earth being cold and dry.  
Now for these 4 quarters in briefe, & namely for the fruits  
they yeild, take these two verses of Ouid.  
Poma dat Autumnus, formosa est messibus æstas,  
Ver præbit flores, igne leuatur hyems.

---

*Cleobuli anigma de anno. Laert. Lib. 1.*

Est vnus genitor, nati bona pignora bis sex,  
Triginta cuius natis, sed dispare forma,  
Hæc nunc aspectu, ingræque coloribus istæ,  
Atque immortales omnes moriuntur ad vnâ.

## Eclipses. 1625.

There wil be this yeare presented to y<sup>e</sup> view of the inhabitants of the earth, 4. Eclipses: Two of the Sun, and Two of the Moone, whereof one onely of the Moone, and that a very small one will be seene of vs.

The first Eclipse will be of the Sunne, vpon the 26. of February, about 4 a clocke in the afternoone.

The second will be of the moone, vpon the 13. of March, at midnight, to the quantitie of two poynts, & this onely will be seene of vs.

The third will be of the Sun, vpon the 22. day of August, betwæene 8 and 9 of the clocke at night.

The 4 will be of the moone, vpon the 6 of September at 10 a clocke and 45. minuts before noone, to the quantitie of 6. poynts

## Of the moouable Feasts.

**M**Dueable Feasts are those which haue no fixed places in the Kalender, and are 6. in number, to wit, Septuagesima, Quadragesima, Easter, Rogation Sunday, Ascension, and Whitsunday.

Septuagesima, is so called of 70. as it were containyng 70. dayes, which the Church doth obserue in remembrance of the 70. yeares, that the Children of Israel were vnder the Babilonian seruitude, and is alwaies three Sundayes before Quadragesima.

Quadragesima, is simply sayd of 40. as containyng 40. dayes, which the Church recounts in remembrance of the 40. dayes that Moses fasted, when he receiued the Lawes of our Lord. Elias fasted so many dayes, and so many dayes fasted Christ before the tempter came.

Easter is the principall of all other feasts, and so ordayned of God at first, and at this day there be three sorts, that is Pascha Hebræorum, the Iewes Easter, Pascha verum our Easter, & Pascha novum, the Roman Easter.

The Iewes Easter was commanded to be kept the 14. day of the first moneth called Abib, which day at euen was the Lords Passouer: and the Nineteenth day should bee the holy Conuocation.

Our Easter was ordayned Three Hundred Twenty Thre yeares after the incarnation, in a Councell of learmed men of diuers nations, assembled by Constantine the great, for that purpose, wherein it was ordayned that Easter should bee celebrated on the Sunday next following the first full Moone that should happen after the entrance of the Sun into Aries, and a new Golden number was there deuised for the same intent. But by reason of the Aequinoctium still flies backward from the 21. of March where when it was, in so much that it is now about the 11. day, by reason whereof I say there sometimes happens 2. full Moones before wee can keepe our Easter, which caused the Romans to alter their Kalender, so that by their Paschall tables they produce Easter alwaies the Sunday following the first full Moone according to the foresaid generall counsell held at Nice in Pontus.

Rogation is so called because, <sup>no, rogat</sup> Ecclesia, the Church commanded vs to continue fasting, processions, and prayers as well against the bodily wolues such as late were in Franco, as also against the spirituall wolues.

Pentecost is so called from Pentecostos which is 50. because there be 50. dayes betwixt Easter and Whitsunday inclusively. And this time the Church doth obserue in memoriall of the holy Ghost that appeared to the Apostles like cloven tongues. Act. 2.

Of

## A Prognostication.

### Of the Heauens, Starres, and Planets.

**H**eaueu, in the mother of Tongues is called Schamaïim: which word (as some affirme) is compounded of Scham signifying There or In that place, and Maïim, waters. Whereupon they conclude, that heauen is nothing else but Aquæ consolidatæ, waters firmly compacted together, as it were Crystall.

The Talmudists alledge that it is eithet compounded of the verbe Schach signifying (in Hichpaël) to wander & of Maïim, because men are drawne into exceeding admiration, in considering the workmanship of the Heauens: Or of Esch and Maïim fire and water. And thereupon Rabbi Bechai in the beginning of Parasch writeth after this manner: The Heauens (sayth hee) were created in the beginning, and are called Shamaïim because they are Esch and maïim fire and water. And in Bereschith Rabba, it is thus read, The Heauens are so called, because men wonder at them saying: Of what are they made? They are made of fire, they are made of water: this is a thing to beadmired.

Yet true it is, that many excellent Gramartians suppose that the Hebrew word is neither deriuatiue, nor compound but priuatiue, of which oppinion is that famous Hebristian, Valentine Schindler. And Fagius a great authoz in that tongue (vpon the first chapter of Genesis) writeth that Abenesra proueth out of the Almalitish tongue (which hath very great affinity with the Hebrew) that Schama signifieth nothing else, but High or Above.

But howsoeuer it be, or whatsoeuer is the true Etymologic of that word, this we are sure of, that Heauen in the Scripture is Thre-fold. 2. Corinth, 12. 2.

1 Aerie, where the Fowles are. Gen. 2. 28.

2 Starry, where the Stars are. Gen. 1. 17.

3 Glozious, where soules are, and it is called the heauen of Heauens, 1. King. 1. 27. and of Philosophers Enipyræum,

The middlemost of which Thre called the firmament, is that which containeth all those beautifull & bright shining lightes, created by the Almighty Elohim, God in thre persons vpon the fourth day of the Creation. Gen. 1. 14. &c.

Which

Which lights (whether moved in their severall spheres according to the generall opinion received from reverend Antiquity: or else moved as Fishes in the sea, or Fowles in the Ayre, according to Tycho Brahe, and others the best moderne observatoꝝ) by the common consent of all Astronomers, are of two sorts, that is to say, Fixed, and Wandring, called Planets of Planaomai, signifying to wander. Fixed Starres are divided into 48 Constellations, which are distinguished into 6 degrees of magnitude; Of the first magnitude are 15, Of the second 45, Of the third 208, Of the fourth 474, Of the fifth 217, Of the sixth 49, to which are added 5 of an uncertaine magnitude, called cloudy, and 9 other yet more obscure, of all which severall sumis the foresaid sum 1023. is made. The Planets are in number 7 which are these,  $\text{h}$  the highest, and next beneath the fixed stars;  $\text{v}$  next, then  $\text{J}$ ,  $\text{O}$ ,  $\text{P}$ ,  $\text{Q}$ , and  $\text{D}$  in order. Now for the diameters, magnitudes, and distances of them, as well fixed, as wandring: behold this Table.

Starres of the magnitude.	Diameters in proportion to the earths Diameter, as	Their bodies containing the earths body.	Times.	Their distances in Semidiameters of the Earth.	Their meane motions.
1	19 to 4	107 $\frac{1}{6}$			
2	269 to 60	90 $\frac{1}{8}$			
3	25 to 6	70 $\frac{1}{5}$			19000
4	19 to 5	55 $\frac{1}{4}$			
5	119 to 36	36 $\frac{1}{8}$			
6	21 to 8	18 $\frac{1}{10}$			
Saturne	31 to 11	22			10550
Jupiter	12 to 5	14			3990
The $\odot$	5 $\frac{1}{10}$ to 1	133			1150
Mars.	18 to 43	13			1745
Venus	6 to 11	6 $\frac{3}{4}$			1150
Mercur	3 to 8	19			115
The $\text{D}$ .	2 to 7	49			6

Where note that the semidiameter of the earth containeth 3834. English Miles (according to the late ingenious mensurations of Wilhebrordus Snellius) the circuit thereof being 24100. miles.
